

PRE*J*

PROPORTIONAL PRESSURE RELIEF VALVES, PILOT OPERATED, WITH PRESSURE FEEDBACK AND INTEGRATED ELECTRONICS

SUBPLATE MOUNTING

p max **350** bar

Q max (see table of performances)

OPERATING PRINCIPLE

- PRE*J* valves are proportional pressure relief valves, pilot operated, with integrated electronics and pressure closed loop, with mounting interface in compliance with ISO 6264 standard.
- These valves are used to control hydraulic circuit pressure and enable the use of the full flow rate of the pump, even with settings approaching calibrated values.
- The two-stage design and wide passages ensure reduced pressure drops thereby improving the system energy performance.
- They are fitted with a manual pressure relief valve which is factory set to $\geq 15\%$ of the maximum value in the pressure control range.
- Valves are available with different types of electronics, with analogue or fieldbus interfaces.
- They are available in three sizes with flow rates up to 500 l/min and in four pressure control ranges up to 350 bar.
- The valves are easy to install. The driver directly manages digital settings.

4.1 - Electrical characteristics

Command signal:	voltage (E0) current (E1)	V DC mA	0 ÷ 10 (impedance Ri > 11 kOhm) 4 ÷ 20 (impedance Ri = 58 Ohm)
Monitor signal (pressure at transducer):	voltage (E0) current (E1)	V DC mA	0 ÷ 10 (impedance Ro > 1 kOhm) 4 ÷ 20 (impedance Ro = 500 Ohm)
Communication for diagnostic			LIN-bus Interface (by means of the optional kit)
Connection			6 pin + PE (MIL-C-5015-G - DIN EN 175201-804)

4.2 - On-board electronics diagrams

VERSION A - External Enable

VERSION B - Internal Enable

VERSION C - 0V Monitor

4.3 - Version with voltage command (E0)

The reference signal is between 0 ÷ 10V. The monitor feature of versions B and C becomes available with a delay of 0,5 sec from the power-on of the card.

4.4 - Version with current command (E1)

The reference signal is supplied in current 4 ÷ 20 mA. If the current for command is lower, the card shows a breakdown cable error. To reset the error is sufficient to restore the signal.

The monitor feature of versions B and C becomes available with a delay of 0,5 sec from the power-on of the card.

5 - PRE*JL - COMPACT ELECTRONICS

In IO-Link networks, the length of the connecting cables is limited to 20 metres. In CA versions, pin 3 and pin 5 are galvanic isolated up to 100 V to avoid earth loops.

5.1 - Electrical characteristics

Command signal:	voltage (E0) current (E1)	V DC mA	0 ÷ 10 (impedance $R_i > 11 \text{ k}\Omega$) 4 ÷ 20 (impedance $R_i = 58 \text{ }\Omega$)
Monitor signal (pressure at transducer):	voltage (E0) current (E1)	V DC mA	0 ÷ 5 (impedance $R_o > 1 \text{ k}\Omega$) 4 ÷ 20 (impedance $R_o = 500 \text{ }\Omega$)

7 - CHARACTERISTIC CURVES

(measured with viscosity of 36 cSt at 50°C)

Typical control characteristics, according to the reference signal for available pressure control ranges, measured with input flow rate $Q = 50$ l/min. Characteristic curves measured without backpressure in T, with linearity and hysteresis compensation set by the onboard electronics.

minimum controlled pressure for pressure control ranges between 140 bar and 350 bar.

8 - STEP RESPONSE

(obtained with mineral oil with viscosity of 36 cSt at 50 °C)

Response times obtained with PRE*J-210 valves, with an input flow rate of 50 l/min and a pressure oil volume of 2 litres. The response time is affected both by the flow rate and the oil volume in the pipework.

13 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals. For fluids HFDR type (phosphate esters) use FPM seals (code V). For the use of other kinds of fluid such as HFA, HFB, HFC, please consult our technical department.

Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics. The fluid must be preserved in its physical and chemical characteristics.

14 - INSTALLATION

We recommend to install the valves either in horizontal position, or vertical position with the solenoid downward. If the valve is installed in vertical position and with the solenoid upward, you must consider possible variations of the minimum controlled pressure, if compared to what is indicated in point 7.

Ensure that there is no air in the hydraulic circuit. In particular applications, can be necessary to vent the air entrapped in the solenoid tube, by using the appropriate drain screw in the solenoid tube.

Ensure the solenoid tube is always filled with oil. At the end of the operation, make sure of having correctly replaced the drain screw. Connect the valve T port directly to the tank.

Add any backpressure value detected in the T line to the controlled pressure value. Maximum admissible backpressure in the T line, under operational conditions, is 2 bar.

Valves are fixed by means of screws or tie rods on a flat surface with planarity and roughness equal to or better than those indicated in the relative symbols. If minimum values are not observed, fluid can easily leak between the valve and support surface.

15 - ACCESSORIES

(to be ordered separately)

15.1 -Mating connectors

Mating connectors must be ordered separately. See catalogue 89 000.

For K11 and K16 versions we recommend the choice of a metal connector to avoid electromagnetic disturbances and to comply with EMC regulations on electromagnetic compatibility. If you opt for a plastic connector, make sure that it guarantees and maintains the IP and EMC protection characteristics of the valve.

15.2 - Mating connectors and caps for fieldbus communication

Duplomatic offers spare parts to be wired and also ready-to-use cord sets. Please refer to cat. 89 000.

15.3 - Connection cable

The optimal wiring provides for 7 isolated conductors, with separate screen for the signal wires (command, monitor) and an overall screen.

Cross section for power supply:

- up to 20 m cable length : 1,0 mm²
- up to 40 m cable length : 1,5 mm² (IO-Link excluded)

Cross section for signals (command, monitor):

- 0,50 mm²

15.4 - Kit for start-up LINPC-USB
